

## Earth Sanctuary Survey Benchmarks

Benchmark 1 is located near the driveway on the western side of the property. Find the telephone pole across the road. There is a marker on the road (as I recall a painted triangle). That is the location of the benchmark

Benchmark 2 is located near the big pond. Go across the road and find the telephone pole. The benchmark is located on the fog line as close as possible to the telephone pole.

Benchmark 3 is located at the eastern side of the property (I believe this is the Emil rd.). Find the telephone pole that is marked "437302-159389". The benchmark is located 12 ft from the telephone pole in the direction of the road centerline.

These benchmarks were obtained using resource-grade GPS, which has inherent inaccuracy. Optimally the surveyors should tie into the closest official benchmark for the most accurate and precise location. This will also allow them to tie our locations into official control for any future work. See <http://www.wsdot.gov/monument> to find the closest benchmark.
